INTRODUCTION TO THE GEORGIA TECH SOFTWARE TOOLS SUBSYSTEM USER'S GUIDE

The documents following this Introduction comprise the most recent version of the User's Guide for the Georgia Tech Software Tools Subsystem for Prime 350 and larger computers. This Guide brings together in one place all the tutorial and reference information useful to novice and intermediate users of the Subsystem. It deals with several important aspects of Subsystem use: the user interface in general, unavoidable aspects of the underlying operating system, and the most-frequently used major commands. Each topic is covered in a separate document (available individually) and all documents are collected together with this Introduction to form the Guide itself. Experienced users, as well as beginning users who wish to expand their knowledge of the Subsystem, will find the Software Tools Subsystem Reference Manual valuable.

The development of the Georgia Tech Software Tools Subsystem was originally motivated by the text Software Tools by Brian W. Kernighan and P. J. Plauger, Addison-Wesley, 1976. That text is still the basic reference for the tools that it covers, particularly Ratfor, the text editor, the macro preprocessor, and the text formatter.
